The diagram illustrates a cross-section of a multi-layer PCB. On the left, there are two square components, one above the other, connected by a vertical line. These components are connected to a central vertical stack of layers. The stack consists of several horizontal layers, with the top and bottom layers being thicker than the middle ones. The top and bottom layers are connected to the components. The middle layers are connected to each other and to the top and bottom layers. The entire stack is connected to a large, solid black rectangular area on the right, which represents the main body of the PCB or a mounting surface.
