gas/vapour/mist/etc release to air

Site and installation

Site description

not given

Installation/Unit description

The plant was operating under standard conditions. In oxidation unit 300 the following reaction occurs: TiCl + 0 -> TiO(s) + 2 Cl (g). After the reaction the solid and the gas (a mixture of chlorine, nitrogen, hydrochloric acid and carbon dioxide) are separated. After treatment of the gas stream, the remaining gas (Cl2,N2, HCl and CO2) is returned to the reactors. The titanium dioxide is dispersed into water in the pretreatment Sump TK 04. Oxidation takes place in three parallel systems (trains). When the above process fails, the gas is directed to the snake scrub system, a chlorine destruction unit. The gas is directed to this system via a vacuum, created by two ventilators. A short power failure at the public power supply was followed by a power failure of the plant emergency power supply. This blocked the two ventilators mentioned above and prevented the working of the snake scrub system. As a result chlorine gas was released at ground level. On the nearby premises of waste-disposal company AVR 32 employees of a building company working on the building of a new chemical oven were injured by the chlorine cloud.

Substances

Substances Involved

Chlorine (C.A.S. No: 7782-50-5, CEE-nr: 017-001-00-7), amount involved: 100-120 kg (0.1-0.12 tonnes).

Substances Classification

02. TOXIC 00. NAMED SUBSTANCE

Substances detail

| Substance | CAS Number | | Quantities (t.) | |
|-----------|--------------|----------|-----------------|--|
| Substance | CAS Nulliber | Involved | Potential | |
| Chlorine | 7782-50-5 | 0.12000 | | |

Causes

- Failure in public power supply
- Failure of emergency power supply of TDF Tiofine
- System error in that the valve to the chimney is closed during a power failure.
- Failure of the chlorine gas detection system through a power failure and/or a design error.
- Procedural error in that TDF personnel awaited the consequences of the incident too passively.
- In general, a relatively low safety policy at TDF/Tiofine.

Organizational

| Causative Factor | Туре |
|------------------------------------|------|
| management organization inadequate | |

| other |
|-------|
|-------|

Plant/Equipment

| Causative Factor | Туре |
|--|---------------|
| instrument/control/monitoring-device failure | inappropriate |

External

| Causative Factor | Туре |
|--|------|
| utilities failure (electricity, gas, water, steam air, etc.) | |

Consequences

Not significant damage 32 hospitalized people (by release) for medical check ups.

Affected Area: installation Affected Area: establishment Affected Area: off-site: local

Human

| On site | Quantity | Quantity/Effect |
|----------|----------|--|
| At risk | | Establishment Population: -1 |
| Off site | Quantity | Quantity/Effect |
| At risk | | Emergency Personnel : -1 OffSite Population : -1 |
| Injuries | 32.00 | OffSite Population : 32 |

Emergency Response

Intervention of ambulance police closed off cross

| Emergency Response | Quantity | Quantity/Effect |
|----------------------------|----------|---|
| On-site systems | | drenching systems (water sprays, monitors, etc.); plant emergency shut-down procedures; gas detection, quantification/dispersion prediction |
| Off-site external services | | external ambulance/victim-recovery services; external services: police intervention |
| Sheltering | | public alerted via media |
| Evacuation | | |
| Other | | |

| Remedial Measure | Quantity | Quantity/Effect |
|------------------|----------|-----------------|
| Decontamination | | |
| Restoration | | |
| Other | | |

Lessons Learned

Theme of the Lessons Learned

Causes - Plant/Equipment

Causes - Organisational

Lessons Learned

Measures to prevent recurrence:

- review of plant in order to prevent dangerous situations following a total loss of power
- check of all safety measures
- the steam driven emergency generator is completed with a diesel
- the gas detection system has been significantly improved through extra detection systems (redundancy) and a link with neighbouring company AVR
- the alarm procedures have significantly been improved
